Datasheet
UMFT200XD Breakout Modules

UMFT200XD is a USB to I²C breakout module

1 Introduction

The UMFT200XD breakout module utilizes FTDI’s FT200X IC to convert USB to an I²C.

1.1 Features

The UMFT200XD is a breakout board that converts USB2.0 Full-Speed to I²C. These modules do not have a USB connector; instead the modules plug directly into the USB host connector and the pads of the PCB makes electrical contact with the electrical contacts of the USB connector.

The I²C interface operates at +3.3V voltage levels, however all I/Os are 5V tolerant.

1.2 Ordering Information

<table>

<td>USB to I²C with four control bus lines, 3.3V power out limited to 50mA and 5V with as safety fuse. I²C signals available via 8 pin female connector.</td>
</tr>
<tr>
<td>UMFT200XD-NC</td>
<td>I²C</td>
<td>USB to I²C with four control bus lines, 3.3V power out limited to 50mA and 5V with as safety fuse. I²C signals available via 8 pads on the PCB</td>
</tr>
<tr>
<td>UMFT200XD-WE</td>
<td>I²C</td>
<td>USB to I²C with four control bus lines, 3.3V power out limited to 50mA and 5V with as safety fuse. I²C signals available via 8, 6” flying leads connected to the PCB pads.</td>
</tr>
</tbody>
</table>

2 Driver Support

Royalty-Free VIRTUAL COM PORT (VCP) DRIVERS for:
- Windows 7 32,64-bit
- Windows Vista
- Windows XP 32,64-bit
- Windows XP Embedded
- Windows CE.NET 4.2, 5.0 and 6.0
- MAC OS OS-X
- Linux 3.0 and greater
- Android

Royalty-Free D2XX Direct Drivers (USB Drivers + DLL S/W Interface):
- Windows 7 32,64-bit
- Windows Vista
- Windows XP 32,64-bit
- Windows XP Embedded
- Windows CE.NET 4.2, 5.0 and 6.0
- MAC OS OS-X
- Linux 3.0and greater
- Android

The drivers listed above are all available to download for free from www.ftdichip.com. Various 3rd Party Drivers are also available for various other operating systems - visit www.ftdichip.com for details.

Use of FTDI devices in life support and/or safety applications is entirely at the user’s risk, and the user agrees to defend, indemnify and hold harmless FTDI from any and all damages, claims, suits or expense resulting from such use.

3 UMFT200XD Signals and Configurations

CN1 connects directly to a USB host or HUB port, or can be connected to a USB extension cable. This connects to USB signals, 5V USB Bus power and GND. When connecting the module to a USB host or HUB the signal pads should be facing upwards when connecting to a horizontal connector and be facing right for vertical connectors. If the module is plugged in upside down no connectivity will be made between PCB and HUB, no damage will occur from plugging the module in the wrong way.

</tr>
</tbody>
</table>

* PWREN# must be used with a 10kΩ resistor pull up. **When in USB suspend mode the outputs clocks are also suspended.
3.4 Configuring the MTP ROM

The FT200XD IC on the module contains an embedded MTP ROM, this can be used to specify the functions of the CBUS0 pin, the current drive on each signal pin, current limit for the USB bus and the descriptors of the device. These features can be programmed using FTDI’s programming utility FT_Prog. For details on using FT_Prog, please see the FT_PROG User Guide.

When programming the MTP ROM please note:

1) The Max Bus Power setting of the MTP ROM should specify the maximum current to be drawn from the USB host/hub when enumerated. For high-powered USB devices the current limit when enumerated is between 100mA and 500mA, for low-powered USB devices the current limit is 100mA.

4 Module Dimensions

Figure 4.1 UMFT200XD-01 Module Dimensions

6 Module Circuit Schematic

6.1 UMFT200XD Schematic

Figure 6.1 UMFT200XD Circuit Schematic
7 Environmental Compliances

The UMFT200XD modules exclusively use lead free components, and are fully compliant with European Union directive 2002/95/EC.

8 Internal MTP ROM Configuration

Following a power-on reset or a USB reset the FT200XD will scan its internal MTP ROM and read the USB configuration descriptors stored there. The default values programmed into the internal MTP ROM in the FT200XD used on the UMFT200XD are shown in Table 8.1.

Table 8.1 Default Internal MTP ROM Configuration

The internal MTP ROM in the FT200X can be programmed over USB using the utility program FT_PROG. FT_PROG can be downloaded from the www.ftdichip.com. Users who do not have their own USB vendor ID but who would like to use a unique Product ID in their design can apply to FTDI for a free block of unique PIDs. Contact FTDI Support (support1@ftdichip.com) for this service.
