Future Technology Devices International Ltd.

DS_FT312D (USB Android Host IC)

The FT312D is a USB 2.0 Full Speed host IC specifically targeted at providing access to peripheral hardware from an Android platform with a USB device port. The device will bridge the USB port to a UART interface via the Android Open Accessory protocol and has the following advanced features:

- Single chip USB to UART interface.
- Entire USB protocol handled on the chip. No USB specific firmware programming required.
- Supports USB bulk transfer mode
- Basic UART interface with RXD, TXD, RTS#, CTS# pins.
- TX_ACTIVE signal for controlling transceivers on RS485 interfaces.
- UART RX buffer size is 5512 bytes
- UART TX buffer size is 256 bytes
- USB_ERROR indicator pin
- Suitable for use on any Android platform supporting Android Open Accessory Mode (Typically 3.1 onwards, however some platforms may port Open Accessory Mode to version 2.3.4)
- 12MHz oscillator using external crystal.
- Integrated power-on-reset circuit.
- +3V3Single Supply Operation with 5V tolerant inputs.
- USB 2.0 Full Speed compatible.
- Extended operating temperature range; -40°C to 85°C.
- Available in compact Pb-free 32 Pin LQFP and QFN packages (both RoHS compliant).

Copyright © 2013 Future Technology Devices International Limited
1 Typical Applications

- Connecting Android phones to USB accessories
- Connecting Android tablets to USB accessories
- Controlling instrumentation from Android devices.
- Home automation via Android devices
- Data logging from USB accessories
- Connecting serial printing devices to Android devices

1.1 Part Numbers

<table>

</tbody>
</table>

Note: Packing codes for x is:
- R: Taped and Reel, QFN 3,000pcs per reel, LQFP 1500 pcs per reel.
- (no suffix): Tray packing, 260pcs per tray QFN, 250 pcs per tray LQFP

For example: FT312D-32Q1C-R is 3,000pcs QFN taped and reel packing

1.2 USB Compliant

At the time of writing this datasheet, the FT312D had not completed the USB Compliancy Test.

Table 3.2 Function pins
4 Function Description

The FT312D is FTDI’s second dedicated Android Open Accessory Mode integrated circuit device or Android Host. The FT312D USB host port is dedicated to support of the Android Open Accessory class and will bridge data between this port and the UART interface.

4.1 Key Features

Easy to use Android Open Accessory IC translating the Device port of the Android device into UART capabilities.

4.2 Functional Block Descriptions

The following paragraphs describe each function within FT312D. Please refer to the block diagram shown in Figure 2.1.

4.2.1 UART Interface Module

The FT312DUART module controls the UART interface providing basic RXD, TXD signalling with RTS#/CTS# hardware flow control. An additional TX_Active signal is supplied to control external RS485 transceivers for users wishing to create a USB to RS485 bridge. The UART supports baud rates from 300 baud to 921600 baud. A full description of the UART module is provided in Section 5.

4.2.2 Buffers

The FT312D provides internal buffering between the USB port and the UART port of the IC for smooth data streaming.

The Android device can send NAK’s to the USB OUT token sent from the FT312D. This can happen when the UART application on the Android is running in the background or multiple applications are launched in the Android device. When the UART application on the Android device is not accepting data, the data will be buffered in the UART RX buffer in FT312D. The UART RX buffer size is 5512 bytes.

The UART_TX buffer which stores data from the USB port, heading for the UART is 256 bytes.

4.2.3 USB Host

The USB Host block handles the parallel-to-serial and serial-to-parallel conversion of the USB physical layer. This includes bit stuffing, CRC generation.

4.2.4 USB Transceivers

USB transceiver cells provide the physical USB device interface supporting USB 1.1 and USB 2.0 standards. Low-speed and full-speed USB data rates are supported. The output driver provides 3V3 level slew rate control signalling, whilst a differential receiver and two single ended receivers provide USB DATA IN, SE0 and USB Reset condition detection. These cells also include integrated internal pull-down resistors as required for host mode.

4.3 Default Descriptor Strings

When the USB port is connected to the Android USB port, the Android platform will determine which application to load based on the strings read from the FT312D. These strings are configurable with a Windows utility: FT312D_Configuration available for download from the FTDI website.

http://www.ftdichip.com

Please refer to the application note AN_236 User Guide for FT312D Configuration to change the default string values.
Default values for the strings are set in the device as per Table 4.1

</tr>
</tbody>
</table>

*Table 4.1 Default Descriptor Strings*
5 UART Interface

The interface implements a standard asynchronous serial UART port with flow control, for example RS232/422/485. The UART can support baud rates from 300 to 921600 with RTS/CTS flow control. The UART can support baud rates from 300 to 115200 with no flow control.

Data transfer uses NRZ (Non-Return to Zero) data format consisting of 1 start bit, 7 or 8 data bits, an optional parity bit, and one or two stop bits. When transmitting the data bits, the least significant bit is transmitted first. Transmit and receive waveforms are illustrated in Figure 5-1 and Figure 5-2:

![Figure 5-1 UART Receive Waveform](image1)

![Figure 5-2 UART Transmit Waveform](image2)

Baud rate (default = 9600 baud), flow control settings (default = None), number of data bits (default=8), parity (default is no parity) and number of stop bits (default=1) are all configurable from the Android application. Please refer to ftdichip document number FT_000532 for further details.

http://www.ftdichip.com

TX_ACTIVE is transmit enable, this output may be used in RS485 designs to enable the line driver for transmit mode.

UART RX buffer size is 5512 bytes and UART TX buffer size is 256 bytes.

**Note:** UART software flow control with XON/XOFF is not supported

UART hardware flow control with DTR/DSR is not supported

**Note:**
The FT312D has to enumerate the Android device before receiving data from the UART device.

This can be implemented by disconnecting the UART TXD signal of external UART device connected to the FT312D RXD signal until after the FT312D has established the USB link with Android device.

The connection sequence should be:
1. Connect FT312D to Android and complete enumeration.
2. Connect the TXD of UART device to FT312D’s RXD then start to receive data.

There are two methods to implement this function:

1. When FT312D connects to the Android device and enumeration is completed, the USB_ERROR# will become Logic 0 (default Logic 1). This signal can be used to control the TTL gate (74LVC2G241, 74LVC1G125 or others) ON/OFF such that the TXD/RXD lines are connected/disconnected.
2. If the UART device has an enable pin (active high enable) such as on the GPS module, the USB_ERROR# can also be used. The USB_ERROR# pin may be inverted with an NPN BJT then connected to the enable pin of the GPS module.

Figure 5-3 UART RXD and TXD connection gated by Enumeration

Figure 5-4 Inverting Gate Control signal to enable GPS module (active high enable)
6 USB Error Detection

Pin 32 of the device is provided to indicate a problem has occurred with the USB connection. The errors are USB device not supported, USB hub not supported and USB device not responding. USB device not supported would occur if the USB port was connected to a non-Android class device port. e.g. The FT312D is not designed to host memory sticks or printers etc. USB hub not supported would be reported if FT312D is connected to a USB hub. USB device not responding would occur if the USB device connected to the FT312D host port did not respond and the enumeration failed. The signal states are as follows:

<table>
<thead>
<tr>
<th>Pin state</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Logic 0</td>
<td>Device connected to USB and functional</td>
</tr>
<tr>
<td>Logic 1</td>
<td>Device not connected</td>
</tr>
<tr>
<td>One 50ms logic 0 pulse</td>
<td>Device not responding. This pulse occurs at plug-in and then the signal returns to logic 1. This then repeats every second.</td>
</tr>
<tr>
<td>Two 50ms logic 0 pulses</td>
<td>Device not supported. These pulses occur at plug-in and then the signal returns to logic 1. This then repeats every second.</td>
</tr>
<tr>
<td>Three 50ms logic 0 pulses</td>
<td>Hub not supported. These pulses occur at plug-in and then the signal returns to logic 1. This then repeats every second.</td>
</tr>
</tbody>
</table>

Table 6.1 Error Detection
7 Absolute Maximum Ratings

The absolute maximum ratings for FT312D are shown in Table 7.1. These are in accordance with the Absolute Maximum Rating System (IEC 60134). Exceeding these may cause permanent damage to the device.

8 Application Examples

The following sections illustrate possible applications of the FT312D.

8.1 USB to UART Converter

The UART signals are at 3V3 level and may be used to drive directly into a FPGA or MCU with a 3V3 interface, or could be level shifted with an RS232, RS422 or RS485 transceiver. The TX_ACTIVE signal is used mostly with RS485 transceivers to enable the Transmit line drivers.

The unused pins may be left unterminated.
8.2 USB to RS232 Converter

Figure 8.2 Application Example showing USB to RS232 Converter

An example of using the FT312D as a USB to RS232 converter is illustrated in Figure 8.2. In this application, a TTL to RS232 Level Converter IC is used on the serial UART interface of the FT312D to convert the TTL levels of the FT312D to RS232 levels. This level shift can be done using line drivers from a variety of vendors e.g. Zywyn.

A suitable level shifting device is the Zywyn ZT3243F which is capable of RS232 communication at up to 1000k baud.

The unused pins may be left unterminated.
9 Package Parameters

FT312D is available in RoHS Compliant packages, QFN package (32QFN) and an LQFP package (32LQFP). The packages are lead (Pb) free and use a ‘green’ compound. The package is fully compliant with European Union directive 2002/95/EC.

The mechanical drawings of the packages are shown in sections 9.2 - all dimensions are in millimetres. The solder reflow profile for all packages can be viewed in Section 9.3.

9.1 FT312D Package Markings

9.1.1 QFN-32

An example of the markings on the QFN package are shown in Figure 9-1. The FTDI part number is too long for the 32 QFN package so in this case the last two digits are wrapped down onto the date code line.

![Figure 9-1QFN Package Markings](image)

Line 1 – FTDI Logo

Line 2 – Wafer Lot Number

Line 3 – FTDI Part Number

Line 4 – Revision and Date Code

1C should be printed on line 4, then a space and then the Date Code.

1. YYWW = Date Code, where YY is year and WW is week number
2. Marking alignment should be centre justified
3. Laser Marking should be used
4. All marking dimensions should be marked proportionally. Marking font should be using Unisem standard font (Roman Simplex)
An example of the markings on the LQFP package are shown in Figure 9-2.

![LQFP Package Markings](image)

**Figure 9-2 LQFP Package Markings**

**Notes:**

1. YYWW = Date Code, where YY is year and WW is week number
2. Marking alignment should be centre justified
3. Laser Marking should be used
4. All marking dimensions should be marked proportionally. Marking font should be using Unisem standard font (Roman Simplex)

### Head Office – Glasgow, UK

Future Technology Devices International Limited  
Unit 1, 2 Seaward Place, Centurion Business Park  
Glasgow G41 1HH  
United Kingdom  
Tel: +44 (0) 141 429 2777  
Fax: +44 (0) 141 429 2758  
E-mail (Sales) sales1@ftdichip.com  
E-mail (Support) support1@ftdichip.com  
E-mail (General Enquiries) admin1@ftdichip.com

### Branch Office – Oregon, USA

Future Technology Devices International Limited (USA)  
7130 SW Fir Loop  
Tigard, OR 97223  
USA  
Tel: +1 (503) 547 0988  
Fax: +1 (503) 547 0987  
E-Mail (Sales) us.sales@ftdichip.com  
E-Mail (Support) us.support@ftdichip.com  
E-Mail (General Enquiries) us.admin@ftdichip.com

### Branch Office – Taipei, Taiwan

Future Technology Devices International Limited (Taiwan)  
2F, No. 516, Sec. 1, NeiHu Road  
Taipei 114  
Taiwan, R.O.C.  
Tel: +886 (0) 2 8791 3570  
Fax: +886 (0) 2 8791 3576  
E-mail (Sales) tw.sales1@ftdichip.com  
E-mail (Support) tw.support1@ftdichip.com  
E-mail (General Enquiries) tw.admin1@ftdichip.com

### Branch Office – Shanghai, China

Room 1103, No. 666 West Huaihai Road,  
Shanghai, 200052  
China  
Tel: +86 21 62351596  
Fax: +86 21 62351595  
E-mail (Sales) cn.sales@ftdichip.com  
E-mail (Support) cn.support@ftdichip.com  
E-mail (General Enquiries) cn.admin@ftdichip.com

Appendix B - List of Figures and Tables

List of Figures
Figure 2.1 FT312D Block Diagram ............................................................... 3
Figure 3.1 QFN Schematic Symbol .............................................................. 6
Figure 5-1 UART Receive Waveform ............................................................ 10
Figure 5-2 UART Transmit Waveform ........................................................ 10
Figure 5-3 UART RXD and TXD connection gated by Enumeration ............ 11
Figure 5-4 Inverting Gate Control signal to enable GPS module (active high enable) .......... 11
Figure 8.1 Application Example showing USB to UART Converter .................. 16
Figure 8.2 Application Example showing USB to RS232 Converter .................. 17
Figure 9-1 QFN Package Markings .............................................................. 18
Figure 9-2 LQFP Package Markings ............................................................ 19
Figure 9-3 QFN-32 Package Dimensions .................................................... 20
Figure 9-4 LQFP-32 Package Dimensions .................................................. 21
Figure 9-5 All packages Reflow Solder Profile ............................................ 22

List of Tables
Table 3.1 Power and Ground ......................................................................... 6
Table 3.2 Function pins ................................................................................ 7
Table 4.1 Default Descriptor Strings ............................................................ 9
Table 6.1 Error Detection ............................................................................ 12
Table 7.1 Absolute Maximum Ratings ....................................................... 13
Table 7.2 Operating Voltage and Current ..................................................... 14
Table 7.3 I/O Pin Characteristics ................................................................. 14
Table 7.4 USB I/O Pin (USBP, USBD) Characteristics ................................ 15
Table 7.5 Crystal Oscillator 1.8 Volts DC Characteristics ............................. 15
Table 7.6 ESD and Latch-up Specifications ................................................ 15
Table 9.1 Reflow Profile Parameter Values .................................................. 23
Table 9.2 Package Reflow Peak Temperature .............................................. 23
Appendix C - Revision History

Document Title: USB Android Host ICDS_FT312D
Document Reference No.: FT_000816
Clearance No.: FTDI# 331
Document Feedback: Send Feedback

**Version 1.0**  
Initial Release  
Feb 2013

**Version 1.1**  
Note added on USB enumeration to be completed before Receiving data in RXD  
Nov 2013
