1 Introduction

The purpose of this application note is to provide users of FTDI chips with a simple procedure for installing FTDI drivers for their devices under Windows 10.

This installation guide is only intended for installing FTDI devices on the following versions of Windows 10.

- Windows 10
- Windows 10 Home
- Windows 10 Pro
- Windows 10 Enterprise
- Windows 10 Education

Windows 10 32 bit and 64 bit are supported.

This document does not cover Windows 10 IoT, embedded or mobile. A separate driver is required for these versions of operating systems.
# 2 Installing FTDI Device Drivers

The Windows Combined Driver Model (CDM) may be installed on XP, VISTA, Windows 7, Windows 8 or Windows 10 allowing applications to access FTDI devices through either the D2XX DLL or a COM port without having to change driver type. However, it should be noted that an application can only communicate through one of these interfaces at a time and cannot send commands to the D2XX DLL and the associated COM port at the same time.

The CDM driver comes in two parts as shown in the block diagram below. The first part is the bus layer (FTDIBUS.sys) that provides D2XX style functionality and is always installed. The second part is the serial COM port layer (FTSER2k.sys) and the CDM driver will determine whether a COM port should be exposed by reading the EEPROM of FT232R, FT245R, FT2232D, FT2232H, FT4232H, FT232H, FT-X series and other FTDI devices. In the case of FT232BM, FT245BM, devices, the CDM driver will default to always installing both the bus and COM port parts.

This COM port installation can be disabled and EEPROM settings ignored by changing the driver INF files as detailed in FTDI Application Note AN_107 Advanced Driver Options. Please note that modifying the INF files of a Microsoft HCK certified driver will invalidate the Windows certification.

The FTDI driver download page is available here [http://www.ftdichip.com/FTDrivers.htm](http://www.ftdichip.com/FTDrivers.htm)

![Figure 2.1 Windows CDM Driver Architecture](image)
3 Installing CDM Drivers

To install CDM drivers for an FTDI device under Windows 10, follow the instructions below:

Connect the device to a spare USB port on your PC.

3.1 Windows Update

If there is an available internet connection, Windows 10 will silently connect to the Windows Update website and install any suitable driver it finds for the device.

Figure 3.1 shows the automatic driver installation taking place.

![Installing USB <-> Serial Converter](image)

Figure 3.1 Windows Update Installation
3.2 Pre-Installation using the FTDI setup executable

The Windows 10 CDM driver is also available as a setup.exe from the FTDI Web Site, as shown in Figure 3.2.

The executable copies the default FTDI driver to the PC’s driver store prior to the FTDI device being plugged into the PC.

![Figure 3.2 Setup Executable Location](image)

Download the setup.exe and right-click and select ‘Run as administrator’ as shown in Figure 3.3.

![Figure 3.3 Setup Executable Run as administrator](image)

You may see a message from ‘User Access Control’ asking ‘Do you want to allow this app to make changes to your PC?’. If so, click Yes to continue.

Press the Extract button as shown in Figure 3.4.
Follow the installation instructions shown in Figure 3.5 including license terms agreement acceptance shown in Figure 3.6 and the driver will be automatically installed. From a legal point of view, the user must accept the license terms of the driver. Successful installation is shown in Figure 3.7.
Device Driver Installation Wizard

License Agreement

To continue, accept the following license agreement. To read the entire agreement, use the scroll bar or press the Page Down key.

**IMPORTANT NOTICE: PLEASE READ CAREFULLY BEFORE INSTALLING THE RELEVANT SOFTWARE:**

This licence agreement (Licence) is a legal agreement between you (Licensee or you) and Future Technology Devices International Limited of 2 Seaward Place, Centurion Business Park, Glasgow G41 1HH, Scotland (UK Company Number SC136640) (Licensor or we) for use of driver software provided by the Licensor (Software).

**BY INSTALLING OR USING THIS SOFTWARE YOU AGREE TO THE**

1. [ ] I accept this agreement
2. [ ] I don't accept this agreement

Figure 3.6 Driver Installation Wizard License Agreement

Device Driver Installation Wizard

Completing the Device Driver Installation Wizard

The drivers were successfully installed on this computer.

You can now connect your device to this computer. If your device came with instructions, please read them first.

<table>

Figure 3.7 Driver Installation Completion
Whenever an FTDI device is plugged into the PC, VCP and D2XX drivers will be installed, depending on EEPROM settings, and listed in device manager as shown in Figure 3.8. Device Manager can be found as shown in Figure 3.9.

![Device Manager View](image)

**Figure 3.8 Device Manager View**

NOTE: The device must be physically plugged in after running the setup exe to complete the installation.
3.3 Manual Installation

If no suitable driver is automatically found then the following procedure should be followed.

Firstly download the latest FTDI windows driver files from http://www.ftdichip.com/FTDrivers.htm and save the driver .zip file to a known folder on the PC. The desktop can be used so that the driver folder can be easily located then extract the .zip file.

To locate the device manager on windows 10, right click on the Microsoft logo at the bottom left hand corner of the screen and select Device Manager as shown in Figure 3.9.

![Device Manager Access](image_url)
In the Device Manager window there should be a device under Other Devices with a yellow warning symbol to indicate a problem i.e. no driver installed, as shown in Figure 3.10. The text next to this device will depend on the device attached. In this example the device was a USB Serial Cable.

![Device Manager View](image)

**Figure 3.10 Device Manager View**

Right click on the other device (USB Serial Cable in this example) to bring up a menu as shown in Figure 3.11. From the displayed menu select “Update Driver Software...”
Figure 3.11 Update Driver Software

This then displays the option for an automatic search or a manual search. Select the second option to browse manually as shown in Figure 3.12.
How do you want to search for driver software?

- Search automatically for updated driver software
  Windows will search your computer and the Internet for the latest driver software for your device, unless you’ve disabled this feature in your device installation settings.

- Browse my computer for driver software
  Locate and install driver software manually.

Figure 3.12 Browse my computer for Driver Software

In the address box put the exact location where the drivers have been saved to. The location should be the top level folder of the extracted files and contain two *.INF files. It is not necessarily the exact same location as shown in Figure 3.13. The drivers could have been saved anywhere on the PC by the user.
Figure 3.13 Search Location

After entering or browsing for the address, select “Next” to start the installation as shown in Figure 3.14.
When the installation has finished a completion screen is displayed as shown in Figure 3.15.

Figure 3.14 Installing driver software
Press Close to close this window and go back to the Device Manager Window.

If the Virtual Com Port option has been selected then the Device Manager will show a device under Other Devices but in addition to this there is a new entry under Universal Serial Bus Controllers indicated in Figure 3.16 as the USB Serial Converter. This indicates the bus layer of the driver is installed. Installing the Virtual Com Port layer of the driver is almost a repeat of the last few steps.
Right click on the other device (USB Serial Cable in this example) to bring up a menu as shown in Figure 3.17. From the displayed menu select “Update Driver Software...”
This then displays the option for an automatic search or a manual search as shown in Figure 3.18. Select the second option to browse manually.
How do you want to search for driver software?

→ Search automatically for updated driver software
   Windows will search your computer and the Internet for the latest driver software for your device, unless you’ve disabled this feature in your device installation settings.

→ Browse my computer for driver software
   Locate and install driver software manually.

Figure 3.18 Browse my computer for Driver Software

In the address box put the exact location where the drivers have been saved to. The location should be the top level folder of the extracted files and contain two *.INF files. It is not necessarily the exact same location as shown in Figure 3.19. The drivers could have been saved anywhere on the PC by the user.
After entering the address select “Next” to start the installation as shown in Figure 3.20.
Figure 3.20 Installing driver software

When the installation is finished a completion screen is displayed as shown in Figure 3.21.
Figure 3.21 Successful Driver Software Update

Note this screen also displays the COM port number assigned to the device.

Press Close to close this window and go back to the Device Manager Window as shown in Figure 3.22.
This time the Device Manager does not have an entry under Other Devices but does show entries under Universal Serial Bus Controllers and Ports (COM & LPT). Figure 3.22 displays a correct installation. The device is now ready to use on COM3.

**NOTE:** Not all devices will install to COM3. The COM port allocation is determined by the installation wizard on the basis of the next free com port as designated in the PC registry. The COM port can be reassigned to another free port in advanced properties as shown in Figure 3.23.

FTDI have also produced a utility called **COM PORT Assignment**.
4 Uninstalling FTDI Devices

The FTDI utility CDM Uninstaller can be used to remove FTDI drivers from the Windows 10 PC. The utility is available on the FTDI website.

Alternately devices can be removed using the Device Manager by simply right-clicking on the mouse and selecting "Uninstall". This will delete the associated registry entries for that device only. Windows 10 provides an automatic method to delete driver files via a check box to "Delete the driver software for this device" on the uninstall dialog box.

This stage is done twice. Once for the device under Ports (COM & LPT) and the next time for the device under Universal Serial Bus Controllers as shown in Figure 4.1 and Figure 4.2.
5 Troubleshooting

5.1 Windows 10 cannot find drivers for my device

This error can occur if the VID and PID programmed into the device EEPROM do not match those listed in the INF files for the driver. The VID and PID programmed into the device EEPROM may be found by using the USBView utility from the FTDI web site. These can then be checked against the VID and PID entries in the driver INF files. If they do not match, that driver cannot be installed for that device without either re-programming the device EEPROM or modifying the list of VID and PID numbers in the INF files.

Please note that only your own company VID and PID or FTDI's VID (0x0403) and associated PID issued by FTDI for use by the customer should be used in the EEPROM and INF files.

End customers should obtain modified drivers from the OEM of the device, and not necessarily edit the files themselves. If the FTDI driver files are edited in any way, the certification is invalidated and the default drivers may not install.
5.2 Devices not shown in Device Manager for uninstalling

Devices that have been installed on a system but are not currently available are referred to as “phantom devices”. These devices are not usually displayed in the device manager, but can be made to be displayed as though they are attached. This allows device properties to be changed or devices to be uninstalled via Device Manager even though the device is not physically connected to the PC.

To display phantom devices in Device Manager, a new system variable is required. Open "Control Panel → System and Security → System" as shown in Figure 5.1.

![Figure 5.1 Advanced System Settings](image)

Select the "Advanced" tab and click "Environment Variables" in Figure 5.2.

![Figure 5.2 Environment Variables](image)
In the System Variables section (NOT THE USER VARIABLES SECTION) shown in Figure 5.3.

**Environment Variables**

**User variables for apps**

<table>

<tr>
<td>Path</td>
<td>C:\WINDOWS\system32;C:\WINDOWS;C:\WINDOWS;System32;Wbem;C:\WINNT</td>
</tr>
<tr>
<td>PATHEXT</td>
<td>.COM;.EXE;.BAT;.CMD;.YBS;.YBE;.JS;.JSE;.WSF;.WSH;.MSC</td>
</tr>
</tbody>
</table>

**Figure 5.3 System Variables**

Click "New..." to display the following window in Figure 5.4.

**New System Variable**

<table>
<thead>
<tr>
<th>Variable name</th>
<th>DevMgr_Show_NonPresent_Devices</th>
</tr>
</thead>
<tbody>
<tr>
<td>Variable value</td>
<td>1</td>
</tr>
</tbody>
</table>

**Figure 5.4 New System Variable**
Create a new System Variable called "DevMgr_Show_NonPresent_Devices" and set the value to 1, then click OK.

Open the Device Manager and select "View → Show Hidden Devices" as shown in Figure 5.5. Device Manager will then show all hidden and phantom devices available on that PC as shaded.

**Figure 5.5 Shown Hidden Devices**
5.3 Windows 10 warning message

If the driver is not certified then a pop up window such as shown below may be displayed.

![Windows can't verify the publisher of this driver software](image)

- **Don’t install this driver software**
  You should check your manufacturer’s website for updated driver software for your device.

- **Install this driver software anyway**
  Only install driver software obtained from your manufacturer’s website or disc. Unsigned software from other sources may harm your computer or steal information.

![See details](image)

**Figure 5.6 Windows can’t verify the Publisher**

If you are certain of the source of the driver the warning can be ignored and you can continue installation by selecting “Install this driver software anyway”.

If you are unsure about the driver source contact your vendor.
5.4 Driver will not install on Windows 10 x64

Windows 10 x64 OS will only allow certified drivers to be installed. The certified driver supplied by FTDI will work with VID 0403 and the following PID's for their respective devices:

PID 6001 for FT232 and FT245
PID 6010 for FT2232
PID 6011 for FT4232
PID 6014 for FT232H
PID 6015 for all FT-X series
PID 601C for FT4222H

If you have a product where the manufacture has customized the driver but has not signed / re-certified it, then the driver will not load. You should contact your vendor to determine if they will support Windows 10 x64.

Figure 5.7 shows the error that is reported when the driver installation fails due to the driver not being certified.

![Update Driver Software - USB Serial Cable]

Windows encountered a problem installing the driver software for your device

Windows found driver software for your device but encountered an error while attempting to install it.

USB Serial Converter

The hash for the file is not present in the specified catalog file. The file is likely corrupt or the victim of tampering.

If you know the manufacturer of your device, you can visit its website and check the support section for driver software.

![Figure 5.7 Problem Installing the Driver]
5.5 Unable to view device installation status

If the installation progress is not shown automatically by the PC, it can be accessed by entering the PC Settings. Click on the Windows icon on the bottom left hand corner of the PC and select Settings. A window should appear as shown in Figure 5.8.

![Windows Settings](image)

**Figure 5.8 Windows Settings**

Select ‘Update and Security’ to view any update status. You may see a similar screen shown in Figure 5.9.
Windows Update

Updates are available.

- FTDI - Other hardware - USB Serial Converter.
- Cumulative Update for Windows 10 Version 1511 for x64-based Systems (KB3134265).
- Update for Internet Explorer Flash Player for Windows 10 Version 1511 for x64-based Systems (KB3133431).

Details

We'll automatically install updates when you aren't using your device, or you can install them now if you want.
